 Generators: 2 x TBA
 Bow thruster: TBA

The 46m Patrol Vessel offers the user be it coast guard, navy or security services the ideal offshore/inshore platform, coupled to the fact that she has top end performance in excess of 30knots and an economical cruising speed of 25knots in sea state three. The vessel offers the paramilitary market an unparallel option when considering vessels in this class. The vessel's highly versatile power package makes it a formidable force capable of high speed interception with alternative extended cruising in either moderate or low speed applications in moderate to heavy sea states.
